ABOUT ZHIK

ZHIK IS MADE FOR WATER

Zhik makes innovative watersports gear that pushes technological boundaries and propels the industry forward. Zhik collaborates with world class athletes and watersports enthusiasts to capture generations of knowledge and create product solutions for the industry. Zhik is energetic, innovative and constantly pushing the boundaries. Zhik gear has been the choice of Olympic and world champions around the globe for more than 20 years, keeping them warm, dry, safe and fast. At the core of all Zhik's products and actions is one key value: our products are "Made for Water".

COMPANY HISTORY

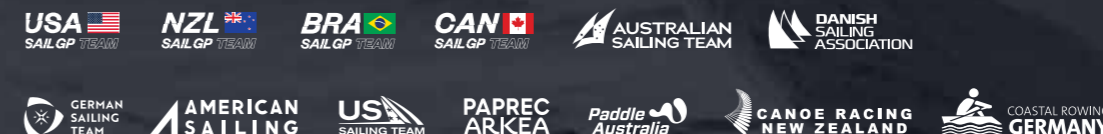

Born from the need for innovation at the 2004 Athens Olympics, Zhik quickly disrupted the dinghy sailing market with innovative thinking and uncompromising performance. After building a reputation as the industry leader across the Olympic dinghy classes, Zhik then set its sights on transforming yachting gear for racing boats and offshore sailing campaigns. This journey reached a defining moment with Dongfeng Race Team's victory in the 2017-2018 Volvo Ocean Race.

Drawing on years of elite-level experience, Zhik has since expanded into multiple watersports categories, including the multidisciplinary sports of paddle and rowing. Partnering with world-class athletes, national teams, and associations, the brand continues to create purpose-built products that deliver at the highest level of competition.

Innovation remains at the core of Zhik. Our ongoing investment in product development, material innovation, and industrial design has reshaped the possibilities of performance apparel - from pioneering eco-friendly alternatives to developing gear and technology for a more sustainable future. Today, Zhik is evolving beyond the water's edge, introducing new technical products that meet the demands of a wider range of outdoor and marine environments.

With distribution centres in Australia, The Netherlands, the United Kingdom, and the United States, Zhik's reach is truly global. Yet our mission remains constant: to push the boundaries of design, technology, and performance to keep people warm, dry, safe, and fast.

PROUD PARTNERS WITH

NEW S2 2025 New Season Two Product Arriving August 2026

eVent

FABRICS

eVent® fabrics is a global leader in waterproof and breathable technology. Designed to keep users dry and comfortable across a wide range of conditions and outdoor activities, their advanced fabric technologies are sustainably engineered to meet the highest performance specifications.

The Zhik OFS800™ range is built with eVent® Direct Diffusion technology, uniquely engineered to maximise waterproofness, but most importantly breathability of the fabric so that the ideal balance of both is achieved.

Yulex® natural foam is composed of hardy plant-based materials derived from organic rubber sources. The product was designed to substitute the toxic manufacturing process of neoprene which has been used to create most of the planet's wetsuits for decades. With this natural alternative, all performance qualities are matched or exceeded so you don't have to choose between performance and environmental impact on the planet. The Yulex® natural rubber products provide optimal performance, are deforestation-free, and are proven equal, or better to neoprene and geoprene in all applications.

A company known for its achievements and quality in rubber tire manufacturing and other products, with a long history of sustainability and performance. Zhik has collaborated with Michelin® in the creation of this bespoke sole design and special rubber formula used in our latest Seaboot range, to provide the lightest, most durable and highest grip sole possible.

REPREVE®

Repreve® is the world's number one brand of recycled performance fiber. The fibers are created from 100% recycled materials, including post-consumer plastic bottles and pre-consumer waste. The result is a performance fiber that contains unique properties including moisture wicking, water repellency, and adaptive warming and cooling. They are also certified and traceable.

YKK®

When it comes to Zippers, YKK® are the industry leaders. Their name is synonymous in the clothing and product industry for quality and reliability. Zhik utilise YKK® zippers in nearly all our garments, including top of the line waterproof zippers in our performance range of outer wear.

e.dye

The e.dye® Waterless Color System™ requires 85% less water, 90% less harmful chemicals, and results in 12% less CO² emissions compared to traditional dyeing. There is no fading and no bleeding of the colours, so the garment will look better for longer.

OrthoLite®

OrthoLite® are leaders of insole solutions. Providing enhanced comfort, performance, and long-term cushioning while creating a cooler drier, healthier environment in every shoe.

RIPSTOP

Ripstop fabrics are woven fabrics, often made of nylon, using a reinforcing technique that makes them more resistant to tearing and ripping.

DURAFLEX®

Duraflex® are the world's leading brand in plastic buckles & accessories for the outdoor sporting goods industry, bringing the most functional and reliable accessories to the backpack market.

ORALITE®

Oralite® provide high quality reflective solutions vital for safety on the water. We use custom & durable Oralite® reflectors on many of our offshore and coastal ranges, providing low light visibility when it matters most.

carbitek

Carbitek is the pioneer and leader in flexible carbon fiber composites. Zhik uses monoflex technology in it's soles, stiff in one direction, highly flexible in the other, providing protection and stability on uneven terrain, while not limiting natural forefoot flexibility.

Hydrovision™ Visor

The Zhik Hydrovision™ Visor is designed to provide unparalleled peripheral vision when you need it most, with a 180° field of view, helping eliminate tunnel vision when wind, rain and spray are at their worst.

Head-lock™ Hood Gusset

Our Head-lock hood gusset is a soft elasticated band that conforms to the forehead of the wearer, providing an extra barrier of protection to stop water and wind entering the hood.

Hydrobase® Rapid Wicking Fleece

Our high wicking grid tech fabric used in this garment pulls sweat from the wearer's skin and spreads it across the fabric, meaning moisture evaporates fast and the garment dries quickly.

Fused Baffling

Fused baffling creates segmented pockets of insulation throughout the garment reducing wind compression and movement of insulation, helping keep the warmth level consistent and uniform.

XWR™ Water Repellency

Traditional waterproof coatings contain harsh chemicals that are often bad for the environment. Zhik XWR™ Coating is Fluorocarbon (PFC) Free and boasts amazing results without damaging the world.

ZhikTex™ II Abrasion Resistance

ZhikTex™ II is an ultra-durable knitted fabric developed by Zhik to withstand the harsh abrasive nature of Sailing. Increasing product longevity and protection for our water wear and wetsuit ranges far beyond that of traditional protective fabrics used in the industry.

Zhik "Set-&Forget" Shoulder Adjusters

Our set & forget shoulder adjustment system removes the need for heavy and uncomfortable shoulder strap buckles when wearing salopettes. Utilising low profile padded straps and a strong double Velcro® fastening system. Keeping you comfortable and reducing wear and tear.

ZhikGrip™ II Hiking System

ZhikGrip™ II is a highly durable rubber stud system on the top of the boot that interlocks with matching studs on the bottom of our ZhikGrip™ II foot straps, reducing sideways movement and connecting sailor to boat like never before. This allows the sailor to relax their legs without slipping out from under the strap and over time reduces fatigue, so they can hike harder for longer.

Zithane® Abrasion Panels

Zithane® reinforcement panels are a lightweight and durable alternative to traditional woven reinforcement, that lead to dramatic weight reductions for crew kit while maintaining top tier abrasion protection & durability.

Graphene Infused Fleece

Utilizing a hexagon lattice of carbon atoms integrated into fabric yarns. This advanced material is an exceptional thermal conductor, effectively returning body heat to the wearer and enhancing warmth by approximately 20% compared to non-graphene-infused materials.

Men's Wetsuit Loo-Rip

Our unique Loo-Rip design, utilised on our Men's range of X-Wetsuits solves the age old problem of toileting when wearing a wetsuit out on the water. The unique flap design is completely waterproof and can be easily unfolded from its Velcro® pouch to allow quick and easy relief.

3D Body Mapped Fit

Many of our close to body items such as wetsuits, use 3D body mapping technology that allows our patterns to be shaped and cut to the precise ergonomics of the human body. This means you get a much more comfortable and performance fit.

Biomotion™ Reflectors

The OFS900™ Range features a reflective print in key areas of the body that allow for fast recognition of body movement and orientation in low light conditions. Providing greater safety for crew while on deck in the extreme oceans of the world at night.

What is Yulex®?

Yulex® natural foam is composed of hardy plant-based materials derived from organic rubber sources. The product was designed to substitute the toxic manufacturing process of neoprene which has been used to create most of the planet's wetsuits for decades. With this natural alternative, all performance qualities are matched or exceeded so you don't have to choose between performance and environmental impact on the planet. The Yulex® natural rubber products provide optimal performance, are deforestation-free, and are proven equal, or better to neoprene and geoprene in all applications.

What is Graphene Infused Fleece?

Zhik wetsuits incorporate graphene-infused materials, utilizing a hexagon lattice of carbon atoms integrated into fabric yarns. This advanced material is an exceptional thermal conductor, effectively returning body heat to the wearer and enhancing warmth by approximately 20% compared to non-graphene-infused materials.

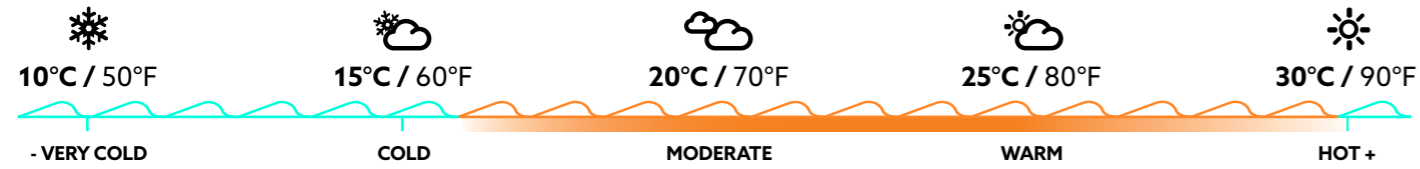

Graphene's natural hydrophobic properties significantly reduce water absorption and dry time, making the wetsuit not only warmer but also more efficient in wet conditions. This innovative approach ensures a high-performance wetsuit that offers superior thermal regulation and faster drying, providing a distinct advantage for users in cold and wet environments.

Zhik Innovation Spotlight - Top & Pant Lock Combo

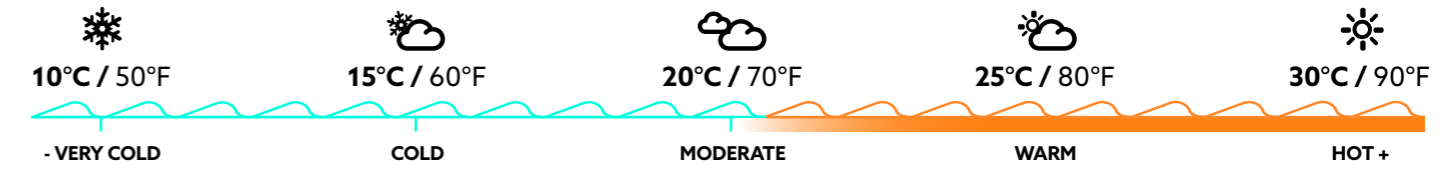

Combine our Women's Microfleece™ X Top or Sleeveless Top with our Pant to create a tight waterproof seal that gives the warmth of a full body skiff suit but with the flexibility to quickly undress when required, solving a long-time issue of Women's toileting when on the water.

What is Repreve®?

REPREEVE®

Repreve® is the world's number one brand of recycled performance fiber. The fibers are created from 100% recycled materials, including post-consumer plastic bottles and pre-consumer waste. The result is a performance fiber that contains unique properties including moisture wicking, water repellency, and adaptive warming and cooling. They are also certified and traceable.

 ZhikGrip™ II Hiking System

ZhikGrip™ II is a highly durable rubber stud system on the top of the boot that interlocks with matching studs on the bottom of our ZhikGrip™ II foot straps, reducing sideways movement and connecting sailor to boat like never before. This allows the sailor to relax their legs without slipping out from under the strap and over time reduces fatigue, so they can hike harder for longer.
